

# INTRODUCING SOUTH JERSEY'S PREMIER ELECTRICAL TRAINING AND APPRENTICESHIP PROGRAM

## ELECTRICAL TRAINING FOR EVERYONE

SJ Electrical Training & Apprenticeship offers superior electrical training for those who want to begin a career in the electrical trade. We also provide extended learning for experienced electricians who wish to enhance their skills and knowledge.

## A NEW APPROACH TO TEACHING THE ELECTRICAL TRADE

SJ Electrical Training & Apprenticeship takes a new approach to teaching students the electrical trade.

The courses offered will feature a combination of traditional book work as well as a hands-on workshop taught by a licensed electrician who is currently working in the electrical industry and is NEMC certified.

## ABOUT THE INSTRUCTOR

Eric Krise is a graduate of Salem County Vo-Tech, and has been actively involved in the electrical field since 1998. In 2009, Eric started his own business with \$2,000 dollars in the bank, a pickup truck, a dream, and a lot of drive. Today, Eric has grown his business, Eric Krise Electric, to employee over 50 people in the Southern Jersey region.

Eric started a weekly training program for the electrician helpers and apprentices at his company where he provides insight, guidance, and training to help them continue to grow in their career, and that the field team is up-to-date on all of the latest best practices to ensure continued quality service.

## ABOUT THE OWNER

Stephanie Krise is the daughter of an electrician and married to an electrical contractor.

After years of struggling to find men and women who have the passion for a career in the electrical field, Stephanie started SJ Electrical Training & Apprenticeship to not only help to promote the electrical trade, but to help educate southern New Jersey youth entering the work force, as well as offer continuing education to those already established in the field.

## OUR MISSION

Our goal is to give the highest level of electrical training through formal education, hands-on training and experience from highly-qualified electricians that are currently working in the electrical field.

## SJ ELECTRICAL TRAINING & APPRENTICESHIP LLC

# JUMP START YOUR CAREER

sjelectricaltraining.com

## OUR PROGRAM GETS RESULTS!

The electrical program is designed to provide exceptional learning results. The program will take students through theory, practice and real life situations that will give them the experience they need in the electrical field to jump start their career. SJ Electrical Training & Apprenticeship believes that everyone can achieve higher learning and offer this for the electrical field and is proud to offer this education to the Southern New Jersey Region.

## WE HELP FIND EMPLOYMENT\*

SJ Electrical Training & Apprenticeship will work with local electrical contractors to assist students in obtaining employment after completion of our course, at no additional cost to the student.

The assistance will consist of helping set up interviews or meetings, giving the word of performance while in the course to electrical contractors seeking electricians.

*\*Although we feel strongly that our graduates will get a job, there is no guarantee or promise of availability and or employment.*

## EDUCATION OBJECTIVE

Our objective is to help individuals achieve success through formal education and training. We want to help our students develop a career not just a job, and to live a better, more comfortable life while being a productive contributor to society and achieving economic stability.

## OUR CONVENIENT LOCATION

SJ Electrical Training & Apprenticeship is located on Route 40 in Pittsgrove NJ, just minutes from RT 55.

Training is conducted in a classroom setting as well as in a hands-on work shop area. There is also outdoor project area for learning to work in the elements and how to handle situations in the “real environment.” Our classroom and workshops are equipped with the appropriate equipment to proficiently train students in residential wiring.

All special tools and equipment will be provided by SJ Electrical Training & Apprenticeship during students training. Classroom and workshops will not exceed 28 to 1 ratio.

# DID YOU KNOW?

- The average median salary of a professional electrician is \$52,720\* per year.
- Electricians have improved manual dexterity and fine motor skills from working with small wires.
- Electricians are able to read detailed plans and schematics.
